Introduction

This summary supersedes the recently issued preliminary report on Pacific Coast canned fruit prices and shipments.^{1/} The earlier report included estimated preliminary data on canners' shipments for 1968-69 and was issued to provide the industries with the latest available information. This report includes, and is based on, final and complete data on f.o.b. prices and movements of the various fruits. It should be noted that the 1968-69 price data incorporated in the report reflect industry operations for the 12-month period, June 1, 1968-May 31, 1969; that is, the complete marketing year 1968-69. Where final or complete data are not available (exports), estimates are provided and used in this report. The results and data presented here are issued to provide the industry and governmental and private marketing organizations with materials used in the discussion and formulation of marketing policies, plans, and programs.

The report first presents summary highlights on the industry average f.o.b. price experience and on the f.o.b. shipments by canners during 1968-69. Then are summarized economic-statistical relationships of the average f.o.b. prices to major market influences for canned cling peaches, pears, freestone peaches, and apricots. Sources of the data and their characteristics are noted before the industry statistics are given in tables which incorporate the basic data and the results of the f.o.b. price analyses.

^{1/} Sidney Hoos and George M. Kuznets, Preliminary Report--Pacific Coast Canned Fruits, F.O.B. Price Relationships, 1968-69 (Berkeley: California Agricultural Experiment Station, May 13, 1969), 31p.

F.O.B. Prices and Movement, 1968-69

The f.o.b. prices which reflect the average industry experience during the 1968-69 marketing year are summarized as follows:

Canned fruit	1968-69 average f.o.b. prices dollars per case; 24 No. 2½ basis
California cling peaches (choice, No. 2½)	5.30
California apricots (choice, No. 2½)	6.70
Pacific Coast pears (choice, No. 2½)	7.25
Pacific Coast Elberta freestone peaches (fancy, No. 2½)	7.10
California fruit cocktail (choice, No. 2½)	6.35
Hawaiian pineapple (fancy, sliced, No. 2½, f.o.b. San Francisco)	8.50

The estimated movement of canned fruit from canners during 1968-69 is given in detail in the appended tables. But the following table presents the indicated summary results.

Canned fruit	1968-69 movement from canners		
	Total	Commercial	Domestic commercial
	thousands of cases; 24 No. 2½ basis		
California cling peaches	27,281	25,634	23,034
California apricots	4,447	3,487	3,434
Pacific Coast pears	8,690	7,962	7,862
Pacific Coast freestone peaches	3,663	3,657	3,657
California fruit cocktail	16,090	15,202	12,802

Also, it is estimated that some 15,857,000 cases (24 No. 2½ basis) of pineapple moved into trade channels through packers' and importers' shipments for domestic civilian consumption.

F.O.B. Price Relationships

In addition to providing the basic marketing information summarized above and in the attached tables, this report presents the results of statistical analyses of the major factors which are related to the industry average f.o.b. prices of canned cling peaches, pears, apricots, and freestone peaches. The major price-affecting factors include the commercial movement from canneries, the level of national disposable personal income, and the relative level of prices of canned fruits competing with the respective canned fruits. Those price-influencing factors are shown in tables appended to this report. The f.o.b. price relationships may be summarized as follows:

Canned Cling Peaches

A change of 10 percent in the total commercial movement (24 No. 2½ basis) of California canned cling peaches, considered by itself, was on the average accompanied by a change in the opposite direction of about 5 percent in the f.o.b. price (choice, No. 2½) of canned cling peaches.

An increase of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by an increase of about 3 percent in the f.o.b. price (choice, No. 2½) of canned cling peaches.

A change of 10 percent in the weighted average of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 4 percent in the f.o.b. price (choice, No. 2½) of canned cling peaches.

Differences between the actual f.o.b. prices of canned cling peaches (choice, No. 2½) and those accounted for by the statistical analysis are given in Table 5 of this report.

Canned Pears

A change of 10 percent in the commercial domestic movement (24 No. 2½ basis) of Pacific Coast canned pears, considered by itself, was on the average accompanied by a change in the opposite direction of about 5 percent a case in the f.o.b. price (choice, No. 2½) of Pacific Coast canned pears.

An increase of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by an increase of about 2 percent a case in the f.o.b. price (choice, No. 2½) of Pacific Coast canned pears.

A change of 10 percent in the weighted average of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 12 percent a case in the f.o.b. price (choice, No. 2½) of Pacific Coast canned pears.

Differences between the actual f.o.b. prices of Pacific Coast canned pears (choice, No. 2½) and those explained by the statistical analysis are given in Table 9 of this report.

Canned Apricots

A change of 10 percent in the commercial domestic movement (24 No. 2½ basis) of California canned apricots, considered by itself, was on the average accompanied by a change in the opposite direction of about 4 percent in the f.o.b. price (choice, No. 2½) of canned apricots.

A change of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by a change in the same direction of about 8 percent in the f.o.b. price (choice, No. 2½) of canned apricots.

A change of 10 percent in the adjusted index of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 7 percent in the f.o.b. price (choice, No. 2½) of canned apricots.

Differences between the actual f.o.b. prices of canned apricots (choice, No. 2½) and those explained by the statistical analysis are given in Table 13 of this report.

Canned Freestone Peaches

A change of 10 percent in the commercial domestic movement (24 No. 2½ basis) of Pacific Coast canned freestone peaches, considered by itself, was on the average accompanied by a change in the opposite direction of about 3 percent a case in the f.o.b. price (fancy, No. 2½) of Pacific Coast canned freestone peaches.

An increase of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by an increase of about 1 percent a case in the f.o.b. price (fancy, No. 2½) of Pacific Coast canned freestone peaches.

A change of 10 percent in the f.o.b. price of California canned cling peaches (choice, No. 2½), considered by itself, was on the average accompanied by a change in the same direction of about 9 percent a case in the f.o.b. price (fancy, No. 2½) of Pacific Coast canned freestone peaches.

Differences between the actual f.o.b. prices of Pacific Coast canned freestone peaches (fancy, No. 2½) and those accounted for by the statistical analysis are given in Table 17 of this report.

Data

Although the sources of the data on which this report is based are indicated in the footnotes of the various tables, the following supplementary explanations may be noted for the 1968-69 prices, movement data, and other economic information used in the analyses.

The f.o.b. prices of cling peaches, pears, freestone peaches, fruit cocktail, and apricots are industry average prices reflecting cannery operations. The f.o.b. prices for canned pears and freestone peaches reflect operations of canneries in the Pacific Northwest as well as in California. The canned pear and freestone peach prices for the Northwest were collected through the Northwest Cannery and Freezers Association and for California were collected through the Cannery League of California. The 1968-69 price data for cling peaches and fruit cocktail were collected through the Cling Peach Advisory Board, and the prices for canned apricots were collected through the Cannery League of California. The price data for Hawaiian pineapple are based on published quotations supplemented by trade information.

The data on canner stocks and movement are based on reports issued by the following agencies: for cling peaches and fruit cocktail, the Cling Peach Advisory Board; for apricots, California canned pears, and California canned freestone peaches, the Cannery League of California; and for Northwest canned pears and freestone peaches, the Northwest Cannery and Freezers Association. The movement data for canned pineapple were derived from trade sources.

The index of United States disposable personal income is based on reports issued by the U. S. Department of Commerce. The levels of competing canned fruit prices for each of the fruits are measured by indexes constructed as indicated in Tables 6, 10, 14, and 18 appended to this report. Exports are

based on U. S. Department of Commerce reports, and United States government purchases are based on releases issued by the U. S. Departments of Agriculture and Defense.

Canned Cling Peaches Price Equations

The equations shown below, based on the 22-year period 1947-48 through 1968-69, were estimated using ordinary least squares. Standard errors are set out in parentheses; R is the multiple correlation coefficient and d is the Durbin-Watson statistic.

$$(1) \quad (\ln \hat{Y}) = \begin{matrix} -6.3465 & -0.4288 & 1.0334 & 0.9320 \\ (2.199) & (0.148) & (0.204) & (0.246) \end{matrix} (\ln X_1) + (\ln X_3) + (\ln X_4)$$

$$R^2 = 0.694 \quad d = 1.41$$

$$(2) \quad (\ln \hat{Y}) = \begin{matrix} -4.9174 & -0.5038 & 1.3731 & 0.4606 & -0.0665 \\ (1.727) & (0.122) & (0.404) & (0.250) & (0.021) \end{matrix} (\ln X_1) + (\ln X_3) + (\ln X_5) - t$$

$$R^2 = 0.810 \quad d = 1.68$$

$$(3) \quad (\ln \hat{Y}) = \begin{matrix} -2.1522 & -0.5410 & 0.7048 & 0.4185 \\ (2.538) & (0.140) & (0.210) & (0.291) \end{matrix} (\ln X_2) + (\ln X_3) + (\ln X_4)$$

$$R^2 = 0.755 \quad d = 1.69$$

$$(4) \quad (\ln \hat{Y}) = \begin{matrix} 0.9209 & -0.5400 & 0.2856 & 0.4218 \\ (0.418) & (0.140) & (0.112) & (0.294) \end{matrix} (\ln X_2) + (\ln X_3) + (\ln X_5)$$

$$R^2 = 0.756 \quad d = 1.69$$

Canned Pears Price Equations

The equations shown below, based on the 21-year period 1948-49 through 1968-69, were estimated using ordinary least squares. Standard errors are set out in parentheses; R is the multiple correlation coefficient and d is the Durbin-Watson statistic.

$$(1) \quad (\ln \hat{Y}) = -9.1998 - 0.4837 (\ln X_1) + 1.3692 (\ln X_3) + 1.2015 (\ln X_4) \\ (1.414) \quad (0.045) \quad (0.142) \quad (0.158)$$

$$R^2 = 0.947 \quad d = 2.35$$

$$(2) \quad (\ln \hat{Y}) = -0.2145 - 0.4821 (\ln X_1) + 0.1655 (\ln X_3) + 1.2018 (\ln X_5) \\ (0.249) \quad (0.045) \quad (0.033) \quad (0.158)$$

$$R^2 = 0.947 \quad d = 2.33$$

Y : F.o.b. price of Pacific Coast canned pears (Choice, No. 2 $\frac{1}{2}$, dollars per case), Table 8, column 1.

X₁ : Commercial domestic movement of Pacific Coast canned pears (in units of 1 million cases), Table 8, column 2.

X₃ : U. S. disposable personal income (1947-48 to 1949-50 = 100), Table 8, column 3.

X₄ : Adjusted index of prices of competing canned fruits (1947-48 to 1949-50 = 100), Table 8, column 4.

- Col. 5: Column 2 as percent of column 4.

Canned Apricots Price Equations

The equations shown below, based on the 22-year period 1947-48 through 1968-69, were estimated using ordinary least squares. Standard errors are set out in parentheses; R is the multiple correlation coefficient and d is the Durbin-Watson statistic.

$$(1) \quad \hat{Y} = -10.3731 - 0.7102 X_1 + 3.1157 (\ln X_3) + 0.0384 X_4$$

$$\quad \quad \quad (4.305) \quad (0.099) \quad (0.686) \quad (0.011)$$

$$R^2 = 0.809 \quad d = 1.09$$

$$(2) \quad (\ln \hat{Y}) = -4.9433 - 0.3892 (\ln X_1) + 0.8073 (\ln X_3) + 0.7268 (\ln X_4)$$

$$\quad \quad \quad (1.608) \quad (0.055) \quad (0.169) \quad (0.179)$$

$$R^2 = 0.805 \quad d = 1.82$$

$$(3) \quad \hat{Y} = -13.0674 - 0.7214 X_1 + 3.4733 (\ln X_3) + 0.5487 X_5 - 0.1592 t$$

$$\quad \quad \quad (9.395) \quad (0.078) \quad (1.944) \quad (0.166) \quad (0.106)$$

$$R^2 = 0.886 \quad d = 1.81$$

$$(4) \quad (\ln \hat{Y}) = -2.4396 - 0.3879 (\ln X_1) + 0.7153 (\ln X_3) + 0.5313 (\ln X_5) - 0.0347 t$$

$$\quad \quad \quad (1.881) \quad (0.053) \quad (0.047) \quad (0.213) \quad (0.022)$$

$$R^2 = 0.830 \quad d = 1.83$$

Canned Freestone Peaches Price Equations

The equations shown below, based on the 22-year period 1947-48 through 1968-69, were estimated using ordinary least squares. Standard errors are set out in parentheses; R is the multiple correlation coefficient and d is the Durbin-Watson statistic.

$$(1) \quad (\ln \hat{Y}) = -9.1556 - 0.2580 (\ln X_1) + 1.2152 (\ln X_3) + 1.2313 (\ln X_4) \\ (1.389) \quad (0.033) \quad (0.146) \quad (0.156) \\ R^2 = 0.898 \quad d = 1.26$$

$$(2) \quad (\ln \hat{Y}) = 0.3530 - 0.2708 (\ln X_1) + 0.0904 (\ln X_3) + 0.8621 (\ln X_6) \\ (0.100) \quad (0.016) \quad (0.015) \quad (0.047) \\ R^2 = 0.976 \quad d = 1.76$$

Y : F.o.b. price of Pacific Coast canned freestone peaches (Fancy, No. 2½, dollars per case), Table 16, column 1.

X₁: Domestic commercial movement of Pacific Coast canned freestone peaches (in units of 1 million cases), Table 16, column 2.

X₃: U. S. disposable personal income (1947-48 to 1949-50 = 100), Table 16, column 3.

X₄: Adjusted index of prices of competing canned fruits (1947-48 to 1949-50 = 100), Table 16, column 4.

X₆: F.o.b. price of California canned cling peaches (Choice, No. 2½, dollars per case), Table 16, column 5.
